Future City Pilot: History & Context

- Geospatial, Civil Engineering & BIM come perfectly together in the Urban environment and are destined to work together

Cataluña implantará el BIM como solución a sus futuras obras

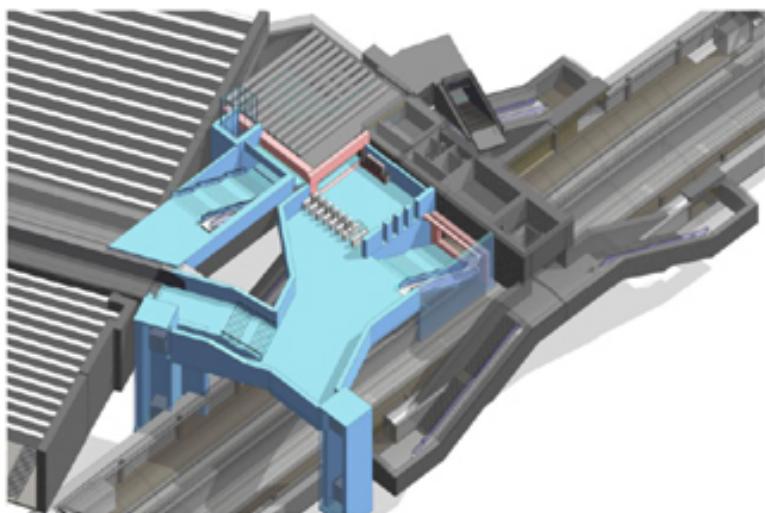

El gobierno catalán establecerá una normativa que concrete y obligue a su aplicación

Declaraciones de Josep Rull, Conseller de Territorio i Sostenibilidad

Catalunya impulsa la metodologia de treball virtual en 3D a l'obra pública

El Govern lidera una comissió interdepartamental per implantar el Building Information Modelling (BIM)

- Consisteix en elaborar un model virtual en tres dimensions d'una construcció, incloent el seu projecte, l'execució i el manteniment

La Generalitat lidera el procés d'implantació a Catalunya de l'anomenat *Building Information Modelling* (BIM), un nou

sistema de treball per a l'obra pública basat en l'elaboració d'un model virtual d'una obra, fet que permet compartir informació entre tots els involucrats en la seva execució i fer-hi canvis.

El conseller de Territori i Sostenibilitat, Josep Rull, s'ha referit aquest dilluns al BIM com una metodologia “que ens dóna molts avantatges perquè permet minimitzar les pèrdues d'informació, millorar la coordinació del projecte entre els diversos actors i les diverses fases, reduir costos i optimitzar els recursos en la construcció i el manteniment”. Per a Rull, el BIM “ens fa ser més eficients i eficaços, les desviacions de costos es redueixen a la mínima expressió i ens permet fer una obra pública de major qualitat”.

Manifest BIMCAT Barcelona

El context socioeconòmic i ambiental actual demana una apostia decidida per l'eficiència, l'estalvi i l'optimització de recursos, molt especialment en l'àmbit de l'edificació i l'arquitectura. Això obliga a modernitzar el sector de la construcció, que arrossega pràctiques que s'han demostrat obsoletes a l'hora de respondre aquesta demanda.

L'entorn del BIM, basat en la col·laboració i transparència de tots els agents que participen en el procés constructiu, configura un nou paradigma en el sector de la construcció l'adopció del qual sembla inevitable -perquè així ho han entès molts països europeus i la pròpia UE-, inajornable - perquè el mateix compromís energètic pel 2020 ens obliga - i desitjable - per la voluntat de canvi i millora que hi ha en el context actual.

Catalunya sempre ha estat un motor de canvi a Europa i ara és bo incorporar aquest canvi per transformar un sector productiu perquè ofereix noves oportunitats, creant un nou marc col·laboratiu de tots els intervinguts en el cicle de l'edificació. Les administracions, els agents de la construcció, la indústria, els tècnics i els professionals han de treballar conjuntament per assolir aquest repte comú, de tal manera que esdevinguï efectiu i estigui atent al que significa la introducció d'una nova actitud envers les tecnologies i metodologies actuals orientades al control, la transparència, la col·laboració i l'eficiència.

A tal efecte, el Govern de la Generalitat de Catalunya i l'Ajuntament de la ciutat de Barcelona es marquen el repte de crear un *Grup de Treball BIM* que ajudi a implementar la cultura, valors, mètodes de treball, tecnologies digitals i electròniques per capacitar la indústria, l'administració pública, els centres de recerca, els col·lectius professionals i el món acadèmic. El *Grup de Treball BIM* actuarà sobre:

- El que ja s'ha construït: els actius immobiliaris del país, la seva actualització funcional, la seva intervenció material i energètica
- El que s'ha de construir: els processos i requeriments per entendre, sol·licitar, contractar i executar obres dins aquest nou cicle de l'edificació
- I la ciutat: entenent les capacitats que poden aportar una construcció industrialitzada per crear edificis intel·ligents que configurin una ciutat i creïn un territori geogràfic intel·ligent, que es pugui gestionar amb eficiència i eficàcia.

El teixit industrial que tenim a Catalunya ha de liderar aquest canvi, amb l'objectiu de treballar per millorar la sostenibilitat en els seus tres àmbits – social, ambiental i econòmic -. Per això caldrà tenir cura en l'ús dels recursos públics i privats necessaris que ens permetin incidir de manera efectiva sobre el canvi de mentalitat i de processos que cal empènyer; per tal que el sector es reactivi de manera responsable en favor del benestar dels ciutadans i de manera decidida per generar un nou futur econòmic i laboral.

Tanmateix, per tal de crear un observatori que mesuri aquestes manifestacions i les contrasti internacionalment, s'aprofitarà l'impuls que es donarà a la celebració anual de la Cimera Europea BIM a Barcelona, peça clau en l'estratègia d'intercanvi d'experiències i d'anàlisi de l'estat de l'art del BIM.

Calendari de treball:

1. Objectiu 2015-2016: Consensuar un mandat BIM a Catalunya
2. Objectiu 2017: Adopció d'uns estàndards IFC, guies, classificacions i processos d'entrega del model digital pensant en cada fase del projecte constructiu, de la seva execució, del posterior manteniment i de la seva integració en la ciutat. Definició d'uns protocols comuns en la creació i definició de la informació compartida entre els agents orientats a la plena interoperabilitat entre les parts.
3. Objectius 2018
 - a. Els equipaments i les Infraestructures públiques de pressupost superior a 2M€ s'hauran de produir en BIM en les fases de Disseny a Construcció
 - b. Circumscriure aquest objectiu als projectes d'obra nova
4. Objectius 2020
 - a. Tots els equipaments i les Infraestructures públiques s'hauran de produir en BIM en totes les fases, Disseny – Construcció – Operació (Manteniment i Facility Management)
 - b. Circumscriure aquest objectiu a tots els projectes d'obra nova i rehabilitació

Es considera que d'aquesta manera es dóna el temps suficient i necessari tant a la indústria com als diferents agents que intervenen en el cicle de la construcció i l'edificació per a l'adopció del BIM.

A Barcelona, 13 de febrer de 2015

Background

- Accreditation
- Spanish culture

License to kill

- What we have realised:

You can be operating in your job during 60 years without being forced to learn anything

No cpd's

Building sector, no technologies/no innovation/no industrialisation/no digital

The sector with more accidents/deaths

No ranking of universities in public media

But, we are the best architects, we have the better cities, we have the best public spaces

What is your concept?

to say that I'm good working with BIM

to certify I know to play in a team, the best players in the world Messi/Cristiano Ronaldo, the best matches, the best results, the best percentages and statistics

We are going to a anglosaxon culture: RICS, PMI, CPD, KTAP... with more trials at courts, with more importance of contracts

Doing the work, doing well the work

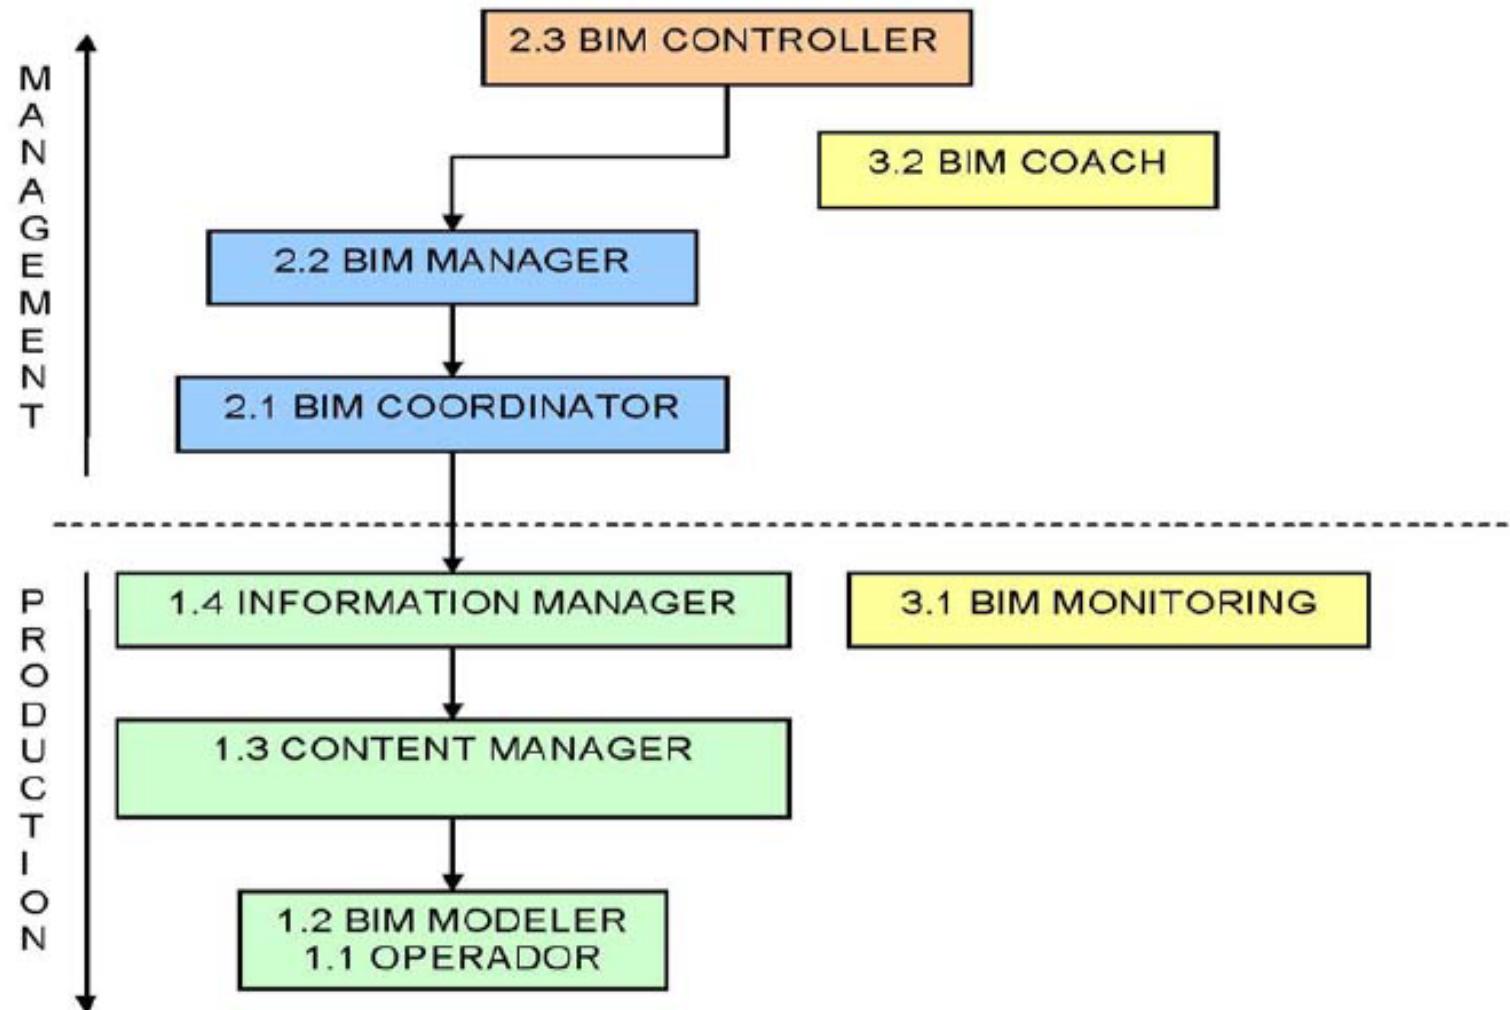

Work is more important than talent when talent is not used

How to make an accreditation when we are talking about Collaborative Projects and not single and independent jobs

Denmark has a process where you evaluate each job done by a professional

When we make any education programme, we are analysed as professors hour per hour, session by session. And the other people?

BIM PROFILES

In this first approach it is clearly discriminated different profiles Management and Production, so it was decided to create two different professional certifications, one for each scope.

The Production profile would be a Head of Project expert in BIM. The name of this profile is being studied, but it would BIM Head Project, BIM Production or similar, like a responsible of the drafting of the construction project, in its various stages of development from Concept Design to As Built

2.- MARKET ANALYSIS

Starting with the Production profile, the market reality leads us to think that the profile BIM Modeler needs a diploma of the acquired knowledge, related to the use of computer programs and therefore the diploma issued by software manufacturers puts it in value.

But we are talking about Professional Certification (competences), not about training courses.

Therefore the profile certifiable related to Production, even at the lower levels, must have more competencies to permit it to higher performance than those of a modeling technician. Therefore it has of knowledge to perform the function of Manager Contents and even Information Manager

As BIM Manager we understand the certification profile that's includes the coordination, communication, customer relationship, management and development, time and costs of BEP (BIM Executive Plan)

So we understand that both profiles, (related to management and production) would cover the need in the market, although, in many cases it is possible that one professional can achieve both professional certificates.

3.- IMPLEMENTATION AND PROCEDURE

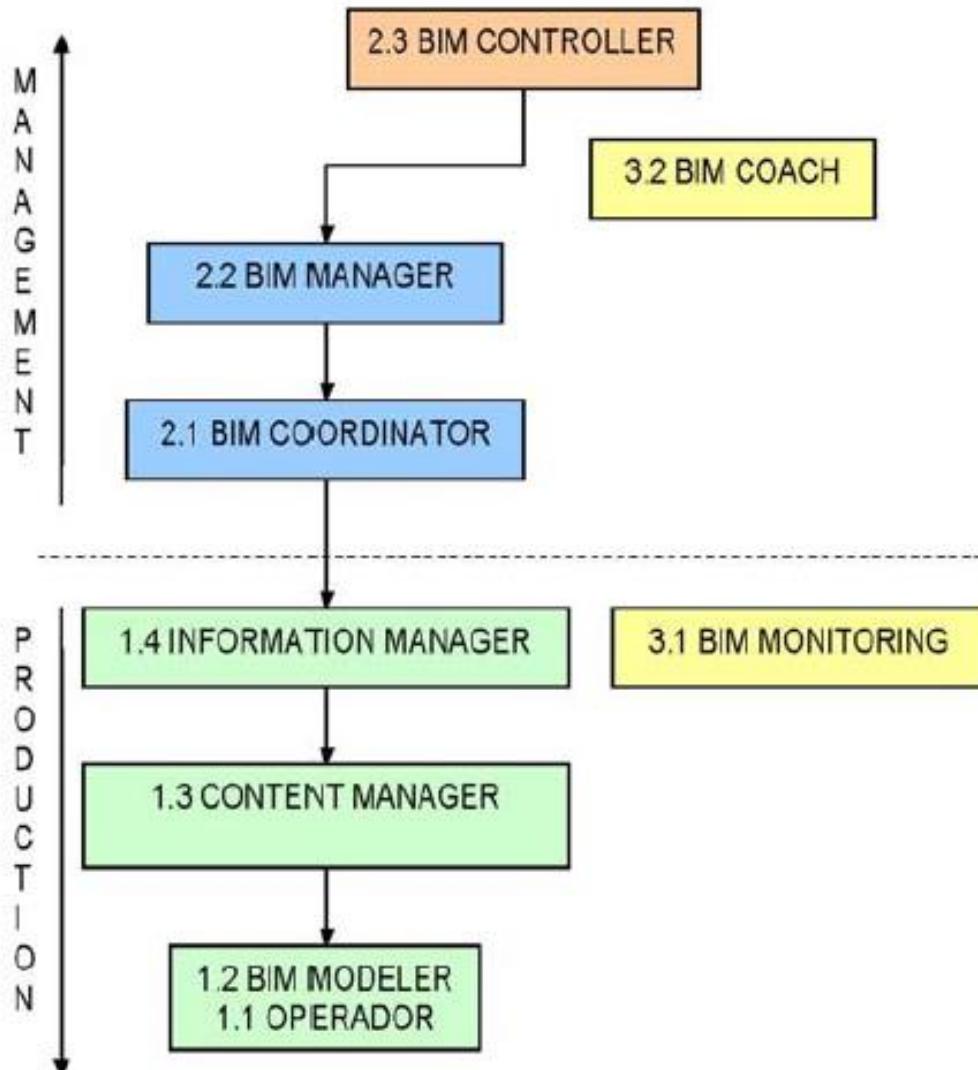

In both cases, there will be four categories of certification, depending on the training and experience that can be demonstrated, as well as their skill level: Professional, Advanced, Expert and Excellence.

Each of them will be accessible by two routes of experience, such as work in a BIM environment in production or management, and as work in equivalent jobs in the traditional way, over 1, 2 or 3 years of work in BIM production or management.

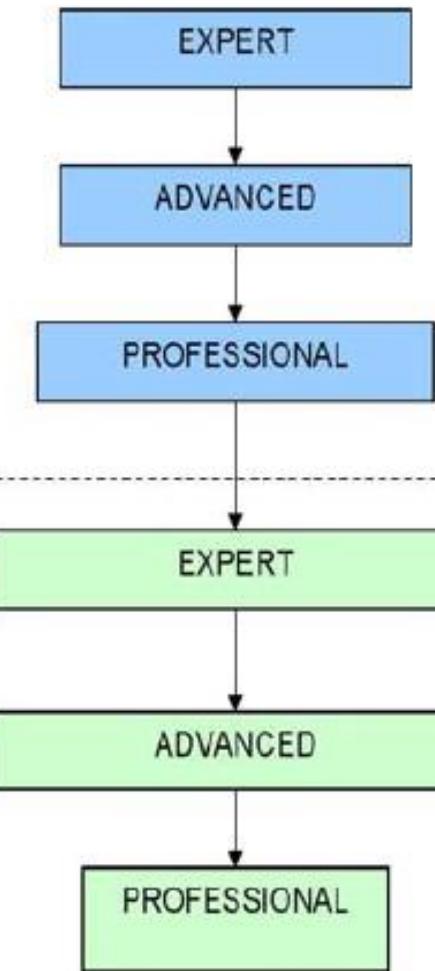

In all cases it will be necessary to prove specific training in BIM 200 hours.

The BIM CONTROLLER, in our opinion, not need specific professional certification, because it would be a BIM Manager Expert or even Excellence. The profiles indicated in yellow on the chart, BIM COACH and BIM MONITORING, are the people who transmit their knowledge or who audit procedures.

5.- SURVEY FOR THE DEVELOPMENT OF A BIM CERTIFICATION

As a starting point for development of professional certification BIM, we believe necessary know the point of view of experts and professionals representing the BIM environment.

As an expert in this methodology, we ask for your opinion about the model (approach) of professional certification in the BIM environment:

5.1.- Do you think a Professional Certification in the BIM environment for building and architecture professionals would respond a market requirement? Y/N Why?

5.2.- Do you consider that the two profiles identified (for certification) correspond to BIM's job that demand the market? Y/N. Why?

5.3.- In your opinion, would there be other profiles (for certification)? Which one's?

5.4.- Do you think it is appropriate the approach of two different certification profiles (management and production)? Y/N. Why?

5.5.- Professional Certification available categories depending on the experience (Professional 1-3 years, Advanced 4-14 years, Expert >14 years, and Excellence add to Expert, the merits). There are different functions for different categories. Do you consider appropriate the functions associated with the categories defined profile of Productions? Y/N. Why?

5.6.- In the case of BIM Manager profile, do you consider appropriate the functions associated with the categories defined for the Management profile? Y/N. Why?

5.7.- According to the market demand, do you think that the BIM Manager has the same functions that Project Management in a building (Person who is total responsible respect to the planning and execution of a project) or not? Same functions/ Different functions. Why?

5.8.- Do you consider Project Manager in building and BIM Manager must have the same competencies? Y/N. Why?

5.9.- Do you think it's important to integrate exiting certification profiles (Modeler, Controller, ...) in the certification approach? Y/N. Why? If your answer is "YES" you might say in what profiles

"Defining Job Titles and Career Paths in BIM"

Malachy Mathews

Dublin Institute of Technology, malachy.mathews@dit.ie

BIM Title with Career Structure - Undergraduate

BIM Technician – (designation with base degree)
Level 7 educated (Arch Tech), (Eng MEP)
(Eng, Struct), (Eng Civil), (Geo)

BIM Coordinator – (designation with base degree)
+ 1 years office experience;
Level 8 educated (Arch Tech), (Eng MEP)
(Arch Design), (Eng, Struct), (Eng Civil), (CM),
(QS), (Geo)

BIM Title with Career Structure - Postgraduate

BIM Technician – (designation with base degree)
Level 8 entry to BIM PG Cert;
(Arch Tech), (Eng MEP) (Arch Design),
(Eng Struct), (Eng Civil), (Geo)

BIM Coordinator – (designation with base degree)
Collaborative
Level 8 entry + PG Cert + BIM PG Diploma + 1

(notamment en IFC) ou encore les spécificités à un pilotage de projet en BIM.

3/ La stratégie aborde les façons de « marketer » un projet grâce au BIM, les utilisations de l'outil dans les différentes phases d'un chantier et la conduite du changement.

Pour l'« option Projet International » de ce Mastère Spécialisé, nous avons déjà développé un partenariat avec l'Université de Newcastle, qui dispose d'une BIM Academy. Nous avons donc étendu notre partenariat à l'option BIM qui profite ainsi, elle aussi, d'intervenants de l'Université : 30% des cours sont donc en anglais.

Quelle est la place de l'interopérabilité au sein de ce Mastère ?

S.R. : Afin que les projets de construction puissent se développer et être optimisés au maximum, mais aussi pour conserver et garantir la pérennité des données, il est essentiel que tous les logiciels soient interopérables, ce sujet est donc intégré au programme pédagogique.

Membre de Mediaconstruct et partenaire du projet MINnD, le CESI souhaite intégrer le BIM dans un autre département de l'école, celui de la recherche. Par ailleurs, l'école réfléchit à injecter du BIM dans ses formations « ingénieur BTP en apprentissage ». Un mouvement est sans conteste en marche.

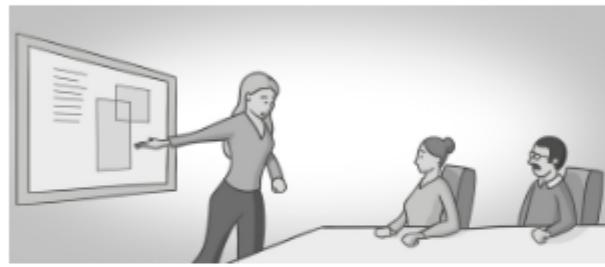

En parallèle : 3 formations courtes

La communication autour de l'option BIM du Mastère Spécialisé a engendré de nombreuses demandes de formations plus courtes (des collectivités territoriales notamment). Le CESI a donc développé 3 formats d'une durée de 10 à 12 jours chacun, reposant sur des notions « métier ».

Modélisateur BIM : élaboration de la maquette numérique 3D et de ses données.

Coordinateur BIM : synthèse de maquettes, simulations thermiques ou acoustiques, extraction de quantitatif ou de métrés.

Chef de projet BIM : pilotage de la stratégie BIM dans son environnement.

ACP ofrece la primera certificación en BIM Manager basada en la norma ISO 17024

La ACP presentó en la segunda edición del European BIM Summit celebrada en el World Trade Centre de Barcelona, su nueva certificación de BIM Manager. Es la primera certificación europea en la materia basada en la normativa ISO 17024. Esta iniciativa también permite definir las funciones de este perfil emergente en un momento en el que los propios profesionales del sector de la edificación demandan un esfuerzo de todos los agentes para mejorar su cualificación en esta metodología,

de forma que vaya más allá de sus meros aspectos tecnológicos, para implantar un cambio cultural y una nueva forma de pensar y ver el proyecto, la obra, la ejecución y su mantenimiento.

El Building Information Modeling (BIM) es una nueva metodología de gestión de la información del ciclo de vida de los edificios. El llamado modelado de información para la edificación es el proceso de generación y gestión de datos de un edificio que utiliza software dinámico en tres dimensiones y en tiempo real. Esta metodología permite reducir pérdidas y recursos en el diseño y construcción y también durante la explotación, mantenimiento, rehabilitación e incluso derribo o desconstrucción del edificio.

Su implantación conlleva la aparición de nuevos roles y perfiles profesionales, entre los que destaca la figura del BIM Manager, un papel poco regulado en lo referente a sus funciones y competencias. De ahí la importancia de la una certificación basada en la normativa ISO 17024 que homogenice las funciones y procedimientos de estos expertos.

El BIM Manager debe ser responsable de una serie de cometidos multidisciplinares, entre los cuales destacan el control, supervisión y coordinación del modelo en BIM, ser facilitador del entorno tecnológico a los diferentes agentes que participan en un proyecto y proponer y coordinar la definición, implementación y cumplimiento del Plan de

¿Qué es ACP?

La Agencia de Certificación Profesional (ACP) es la entidad independiente encargada de emitir un distintivo de la calidad profesional, la capacidad y la competencia de un profesional del sector de la edificación en España para la realización de su ejercicio profesional.

ACP surge a raíz de la demanda de nuevos perfiles profesionales y la recuperación de la capacidad de generar empleo en un sector liberalizado y de máxima competitividad profesional.

Con el objetivo de adecuar el mercado de trabajo español a otros mercados internacionales, ACP ofrece un reconocimiento de la valía de los profesionales de la edificación tras haber sido sometido a un proceso de validación en base a la normativa ISO 17024. ACP nace y opera bajo tres criterios que engloban toda su actividad:

- Confianza
- Independencia

|| ÚLTIMAS NOTICIAS

- > La Agencia de Certificación Profesional homologa catorce cursos de la Escuela de Edificación de Madrid
- > PREMAAT firma un acuerdo de colaboración con ACP
- > ACP ofrece la primera certificación en BIM Manager basada en la normativa ISO 17024
- > La Agencia de Certificación Profesional homologa los cursos de formación del CAATEEB
- > La ACP reconocerá la formación de postgrado en edificación de la Universidad Europea de Madrid

requiere que un profesional tenga vocación de aprendizaje continuo, que esté altamente especializado, tenga un mayor desarrollo de sus habilidades y actitudes y que, además de su capacitación técnica, se adapte rápidamente a los cambios, sea autónomo y tenga un alto nivel de iniciativa. Su formación, experiencia, dominio de idiomas, movilidad geográfica y su red de contactos son factores clave para afrontar el ejercicio profesional. Todo profesional necesita tener desarrollada una marca personal que le dote de mayor profesionalidad.

Y además necesita demostrar sus conocimientos, experiencia y competencias. Por ello, todo profesional necesita tener desarrollada una marca personal que sea su aval profesional.

La certificación otorgada por ACP se obtiene a través de un proceso objetivo e imparcial, facilitado por una herramienta informática de fácil manejo creada para tal efecto y en función de criterios como la experiencia del profesional, la formación y las competencias y nivel de profesionalidad.

En función de estos criterios, se han establecido categorías de certificación en función del perfil del profesional: Professional, Advanced, Expert y Excellence.

Los ámbitos de especialidad que encontramos dentro del sector de la edificación son: Project Manager, Concepción, Diseño, Producción, Ejecución, Seguridad, Salud, Área de gestión, Sostenibilidad y Eco eficiencia y Auditoría Externa.

La certificación profesional va destinada a los profesionales de la edificación pero no es excluyente, sino que persigue conseguir el mayor número de adhesiones posibles tanto del sector como de otros ámbitos.

El sistema de certificación de la ACP es muy riguroso para dotarlo de prestigio nacional e internacional, pero sencillo en forma para facilidad del profesional. El proceso de certificación se desarrolla a través de una plataforma informática situada en la web de ACP, lo que permite un proceso amigable con el candidato.

El profesional cuenta con un sistema sencillo, de coste mínimo y que se adelanta a las exigencias de la ley, dando soluciones por anticipado.

En España existe un rango mínimo de especialidades del sector de la construcción cubiertas por certificados. ACP surge para paliar esta situación y dar cobertura al profesional a nivel internacional.

Para el profesional, estar certificado es:

- Mejorar tu visibilidad como experto: diferenciación y distintivo de calidad.
- Un aval profesional.
- Potenciar la imagen profesional ante una oferta laboral, empleadores y clientes.
- Mejorar la empleabilidad ya que pone en valor la experiencia y la especialización.
- Mejorar y potencia la marca personal y profesional.
- Cumplimiento de posibles requerimientos internacionales de contratación y mejora de las oportunidades de movilidad laboral internacional.
- Disponer de un certificado en línea con entidades similares de reputación internacional como RICS.
- Desarrollo profesional especializado.

PARA EMPRESAS E INSTITUCIONES

ACP persigue ser un aval para las empresas ante sus clientes o antes las administraciones públicas en las licitaciones, bajo una adecuación a los estándares internacionales. La certificación de los profesionales de una empresa a través de ACP supone un impulso a la comercialización, al desarrollo de negocio y al aumento de la competitividad.

Para las empresas, la certificación profesional de la ACP:

- Es garantía de cualificación de los profesionales ante los clientes.
- Aspecto diferenciador ante el cliente.
- Consolida la imagen de profesionalidad en la presentación de ofertas.
- Herramienta de apoyo para la internacionalización.
- Confianza y seguridad en la cualificación y experiencia de los candidatos a un puesto ofertado.
- Un reconocimiento profesional de los empleados.

PARA PARTICULARES

Mediante los **listados de profesionales certificados** por la Agencia de Certificación Profesional , cualquier particular puede tener la confianza y seguridad de que contrata a un especialista en ese trabajo, con el aval de una institución independiente que acredita su valía.

Las primeras especialidades que certifica ACP a nivel nacional son:

- Auditor Energético en Edificación
- Consultor Técnico en Edificación
- Director de Ejecución de la Obra
- Coordinador Seguridad y Salud
- BIM Manager
- Jefe de Obra (próximamente)

Para cada una de las especialidades se han establecido distintas categorías de certificación en función del perfil del profesional:

- Junior (Solo para Consultor Técnico en Edificación)
- Professional
- Advanced
- Expert
- Excellence

El certificado tiene una duración específica, de manera que para asegurar que un profesional mantiene actualizados sus conocimientos y habilidades, se le exige que demuestre (mediante formación continua, actuaciones profesionales, examen, etc.) que continúa estando capacitado para el ejercicio de una determinada actividad.

Categoría	Certificado de inicio	Mantenimiento (*)		Renovación	Aumento de Categoría	Copia del Certificado
		año	mes			
Professional	340,00 €	120 €	10 €	255,00 €	367,50 €	42,00 €
Advanced	490,00 €	120 €	10 €	367,50 €	480,00 €	
Expert	640,00 €	120 €	10 €	480,00 €	592,50 €	
Excellence	790,00 €	120 €	10 €	592,50 €	-----	

- A estos precios habrá que añadir el 21% de IVA.
- Los precios son susceptibles a cambios sin previo aviso.

Bonificaciones

- Si tu Colegio tiene acuerdo con ACP, tienes una bonificación de un 6% de descuento. Esta bonificación será aplicable siempre que se evidencie que estás al corriente de pago con las cuotas de colegiado.
- Para segundas Certificaciones se aplicará un 10% de descuento.
- En caso de acogerte a pago fraccionado, las bonificaciones se regularizarán en el último pago.
- Consulte nuestras promociones para empresas que presenten a un grupo de profesionales a la certificación.

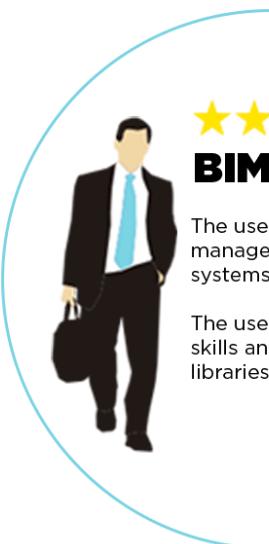

Certificado de Inicio da derecho a:

- Solicitud de certificación.
- Asesor durante el proceso.
